---

HepcoMotion, a leading producer of high quality guide systems, is pleased to showcase its products for the first time at LogiMAT, Germany's leading intralogistic trade show which takes place on the 10th – 12th March 2020 in Stuttgart.

Intralogistic plays an increasingly important role across all industries. For instance, companies are looking for lasting and efficient solutions that enable the optimisation of automated storage. HepcoMotion's high quality guide systems offer the perfect solution. Thanks to the component based approach, a solution can be found regardless of the requirements which may include dealing with complex spatial set-ups or overcoming long distances as well as moving potentially heavy loads. Importantly, HepcoMotion's products offer a long lifetime with minimal maintenance requirements.

An application example can be seen [in this video](#) of a fully automated storage and retrieval system. Here, HepcoMotion's SBD belt driven actuator ensures a smooth transfer from and to a carousel. Thanks to its use of HepcoMotion's high capacity re-circulating ball guides, it provides improved moment load capacity and longer life even in high duty linear applications. Visit HepcoMotion in Halle 7, G53.
