

HepcoMotion Opens New Stockholding Factory in Netherlands

<https://www.hepcotion.com/blog/latest-news/hepcotion-opens-new-stockholding-factory-in-netherlands/>

Linear motion specialist HepcoMotion is to open a 3000m² factory in Veghel in the South West Netherlands. The new facility, named 'HepcoMotion Europe', will hold extensive stocks of HepcoMotion's products and provide a rapid and cost-effective delivery service to Hepco's many customers within the EU Single Market.

This new factory is a substantial new venture for HepcoMotion, and will expedite and simplify distribution of products to customers in the EU. There will be a €multi-million investment in stocks of HepcoMotion GV3 Linear Guides, SL2 Stainless Steel Linear Guides, PRT2 Ring Slides and Track Systems, Bishop-Wisecarver DualVee single edge slides and UtiliTrak linear components. There will also be a comprehensive range of HLG Linear Ball Guides, and GFX guidance systems to work with the Beckhoff XTS eXtended Track System. HepcoMotion is also investing in state-of-the-art production facilities, handling equipment and information systems. A new logistics team will complement its existing and extensive networks of sales offices, field sales engineers and distribution partners.

The new facility is expected to begin operating in January 2022, taking over the import of all goods from HepcoMotion's factory in the UK for forward distribution throughout the EU. Significant improvements in transit times and a much easier import procedure are expected with immediate effect. HepcoMotion Europe is borne from HepcoMotion's commitment to providing excellent service and improving lead times in Europe and signifies the company's continuing growth with the whole of the EU.
