

HepcoMotion set to exhibit at Technishow

<https://www.hepcotion.com/blog/latest-news/hepcotion-set-to-exhibit-at-technishow/>

World-leading linear motion manufacturer HepcoMotion looks forward to showcasing its innovative range of products at Technishow in Utrecht the largest industrial production technology and processing exhibition in the Benelux area. Hepco has a wide range of products to meet practically any requirement from linear to circular and heavy duty to XYZ systems.

Visitors will be able to see Hepco's GFX Guidance System for Beckhoff XTS (eXtended Transport System). This solution utilises Hepco's PRT2 and 1-Trak guidance systems to work with Beckhoff's XTS circuit linear system to meet the needs of higher duty XTS applications where motion profiles and long-term durability requirements are particularly demanding. Movers can be individually controlled and thus frees throughput time from limitations usually caused by the slowest process: movers can dwell on a station longer or shorter if needed. The combination of technologies from market leaders Beckhoff and Hepco provides users with a robust, high production and flexible solution that will revolutionise production processes in many manufacturing applications. This system is ideally suited to a range of applications, such as a variable speed lane divider to sort randomly positioned items into separate lanes, or a double-sided system for a compact application that requires multiple motion profiles.

Hepco's core V guide linear system: GV3, will also be showcased. GV3 is designed to serve a diverse range of automation and linear applications and is suitable for a wide variety of environments from clean rooms to hostile conditions. Highly accurate, GV3 is particularly suitable for high precision applications in the medical and scientific industries, or any application where accuracy is paramount. One of the quietest linear systems on the market, GV3 offers high speeds of up to eight metres per second.

Hepco is well known for its V guide technology – a unique wiping action that expels debris from the rail, keeping machines running and reliable. Hepco has been leading the development of V Guide technology since 1969 and continues to develop innovative linear products that offer new solutions to design engineers.

With Hepco's experienced team on hand to discuss applications and product offerings, Hepco looks forward to meeting visitors in Hall 10, Stand B006 at Technishow on the 1st – 4th September.
