---

HepcoMotion, one of the leading producers of high quality linear- and ring-guidance systems is pleased to be back at Germany's leading exhibition for the packaging industry. The trade show takes place from 24-26 September in Nuremberg, Germany.

HepcoMotion will present a selection of its product range, including the latest addition to its successful GV3 product range. The Side Adjustment Carriage enables easy readjustment of the V-bearings or if needed, to take off the carriage from the linear guides.

To demonstrate the importance of high quality linear guide systems in the modern production process, HepcoMotion is also pleased to present a new exhibition unit created by Stäubli, the global mechatronics solution provider. The exhibition cell showcases the power of robotics in conjunction with Beckhoff's linear motion technology and HepcoMotion's linear guide system. HepcoMotion's GFX system was specifically developed to fit the Beckhoff eXtended Transport System (XTS), the high performance linear motion system, making it an ideal solution for high performance applications where motion profile and long term durability requirements are particularly demanding.

HepcoMotion's stand is located in hall 3, stand number 403. Visitors will be able to talk to our experienced sales engineers and assist at regular product presentations on our stand. The presentation times will be announced nearer the time on the Fachpack website.
