Linear Shafting

Engineered for Maximum Linear Bearing Performance

Introducing
simplicity® 60 PLUS® SHAFTING

Only certified *Simplicity 60 Plus Shafting* provides maximum bearing performance.

Linear Ball Bearings

The right amount of microscopic surface texture holds lubrication for consistent smooth ball rotation minimizing the effects of metal-to-metal contact.

- **Excellent rigidity** while providing smooth, quiet operation
- **Extremely low friction** - rolling elements provide consistent anit-friction movement
- **Outer shell** - Available with steel jacket or self-aligning super bearing shell.

Simplicity® Plain Bearings

The Frelon® break-in and transfer process operates at maximum efficiency with Simplicity 60 Plus Shafting resulting in true self-lubrication and the longest life possible.

- **Self-lubricating** - maintenance-free, additional lubrication optional
- **Wide temperatures range** (-400°F/+400°F), (-240°C/+204°C)
- **Vibration damping** – eliminates fretting corrosion

New Round Shaft Technology Catalog

Mini-Rail® Miniature Linear Guides

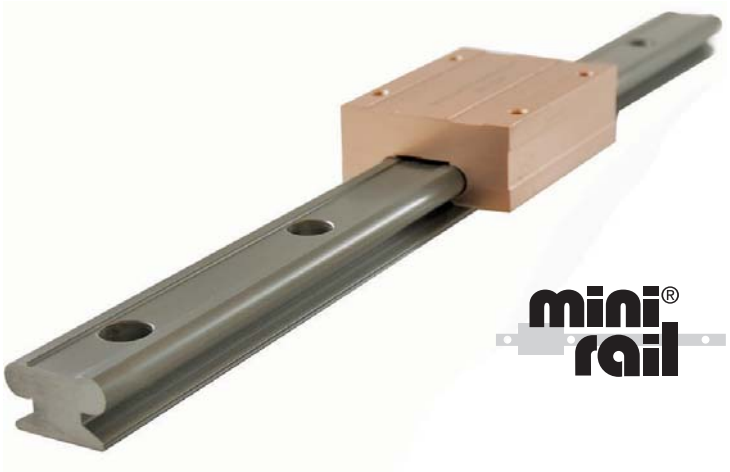
Product Overview

PRODUCT OVERVIEW

An economical alternative to conventional miniature linear guides, Mini-Rail requires no maintenance, is fully interchangeable with industry standard sizes and is maintained in stock for quick delivery.

Mini-Rail miniature linear guides are available in five sizes: 7, 9, 12, 15 and 20mm - in lengths up to 3600mm, meaning no cumbersome butt joints. These guides are precision manufactured out of lightweight aluminum alloys to ensure long life and corrosion resistance.

- No rolling elements
- Self-lubricating Frelon GOLD® Liner
- Withstands vibration and shock
- Corrosion-resistant - ideal in harsh environments
- Ceramic coated, aluminum rail
- Compact design- small footprint

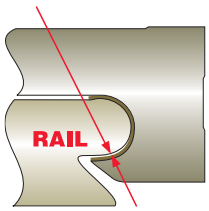


CARRIAGE CONFIGURATIONS

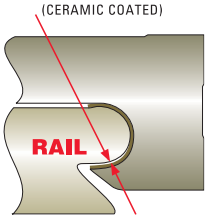
Precision Series: Ceramic coated rails and carriages are corrosion resistant. Frelon GOLD® self-lubricating liner delivers the best overall performance, the highest loads, the best wear life, and speeds. Most precise running clearance for high precision applications.

Compensated Precision Series: Same as Precision Series except with additional clearance provided to tolerate misalignment.

Precision Series
.025 - .051mm
Running Clearance
(CERAMIC COATED)



Compensated Precision Series
.064 - .089mm
Running Clearance
(CERAMIC COATED)



Frelon GOLD® and Frelon® J are Teflon® based materials that are truly self-lubricating. Frelon® materials are bonded to the carriage creating a one-piece unit.

APPLICATIONS

- Medical Precision
- Food Processing
- Automation
- Electronics
- Mobile Home Components
- Packaging
- Product Movement
- Printing
- Semi-conductor

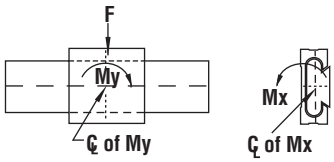
20	1112	24.9	14.7	14.7



PERFORMANCE RATINGS FOR LINEAR MOTION

Plane bearings are rated by their limiting PV, which is a combination of load over a given surface area and the velocity.

BEARING MATERIAL	MAX. "PV"	MAX. "P"	MAX. "V" (NO LUBRICATION)
Frelon GOLD®	20,000 (psi x ft./min.) or 0.7 N/mm^2 x m/s	3000 psi or 20.68 N/mm^2	300 sfm or 1.524 m/s
Frelon® J	10,000 (psi x ft./min.) or 0.35 N/mm^2 x m/s	1500 psi or 10.34 N/mm^2	140 sfm or 0.711 m/s

PV = The performance measurement of plane bearings.

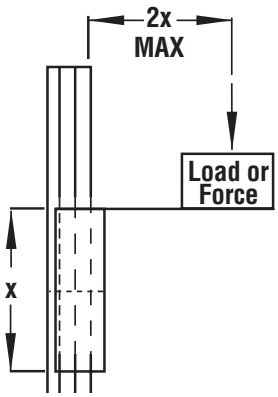
PV = P x V, where P = pressure (load) in psi (kgf/cm^2)

V = velocity (speed) in sfm (m/min.)

NOTE: All three parameters must be met by an application for the bearing to perform properly.

CANTILEVERED LOADS

Binding of the carriage will occur if the 2:1 ratio for cantilevered loads and drive forces is exceeded. This principle is not load or force dependent. It is a product of the coefficient of frictions associated with plane bearings. Contact factory or website for additional information.



LOAD/MOMENT CONVERSION

N = 4.45 x (lbs.)

N-m = 0.113 x (in.-lbs.)

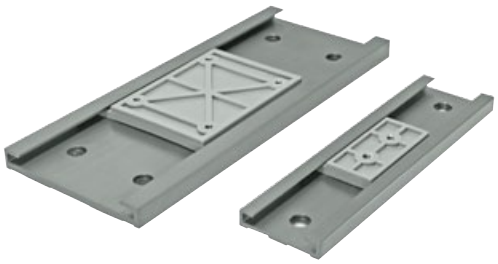
Low Profile Mini-Rail® - LPM

Miniature Guide/Slide Motion Systems

LOW PROFILE MINI-RAIL® - LPM

- Low profile for small spaces
- Low cost polymer slider
- Molded SS threaded Inserts
- Double rail track
- Ideal in harsh environments
- Available in four sizes



Materials: SimGlide™-J Polymer slider (UL 94 HB flammability rating)
Molded-in stainless steel thread inserts
Anodized aluminum rails

Operating Temperatures: -35C to 65C (-30F to 150F)
Chemical Resistance: Resistant to lubricants, fuels, dyes, weak acids
Maximum Velocity: 10 m/s
Load Reduction Factor: 0.7-1.0 for low speed application; 0.4-0.7 for medium speed application; 0.1-0.4 for high speed application

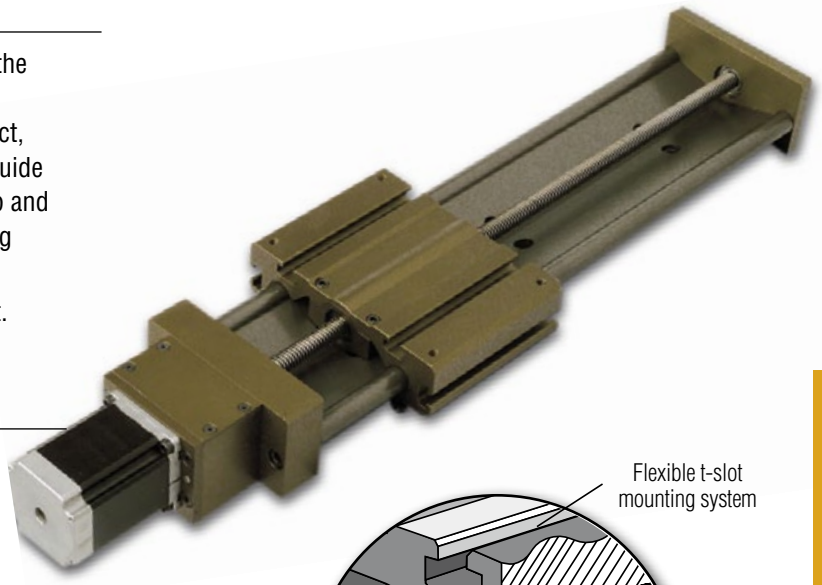
PRODUCT OVERVIEW

Based on proven Simplicity® linear bearing technology, the Uni-Guide contain Frelon GOLD® self-lubricating bearing material. This material results in no metal to metal contact, while dampening vibrations and shock loads. The Uni-Guide unique two-piece assembly eliminates tolerance stack up and the integrated lightweight packages can drop into existing applications making installation easy. Ideal for low cost automation, positioning tables and packaging equipment.



FEATURES & BENEFITS

- Two-piece assembly - lightweight and eliminates tolerance stack
- Self-lubricating - Frelon GOLD® provides low wear, low friction, and high strength
- Lengths up to 10' - butt-joinable for longer lenghts
- Mounting Flexibility
  - Pre-drilled rails
  - T-slots & mounting holes on carriages
  - Side or top mounting
- Easy drop in unit - no alignment needed
- Drive options
  - Ball
  - Lead screw (includes motor and drive)
  - Belt Driven
- Corrosion-Resistant - ideal in washdown environments
- Pre-engineered - ready to use

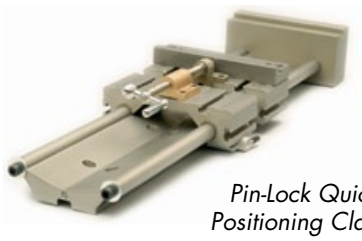
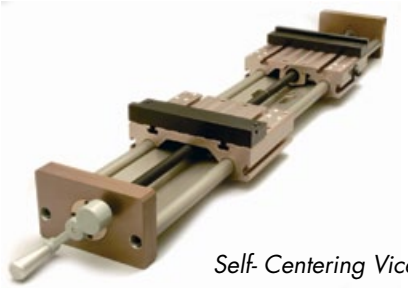
Uni-Guide Ratchet



Pin-Lock Quick Positioning Clamp

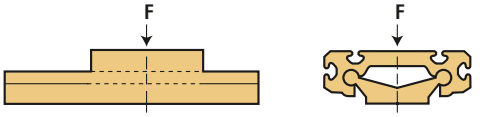


Self- Centering Vice

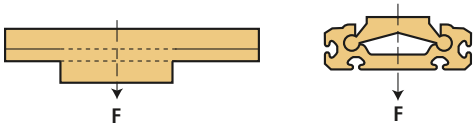
* Optional configurations and special carriages are available. Contact manfuracturer for availability.

STATIC LOADS WITH NO DRIVE MECHANISM

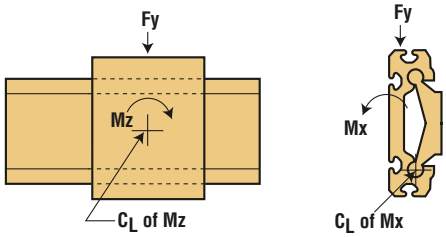
The numbers below are for guides only in a static condition. The drive mechanism selected (lead screw, ball screw, cylinder, etc.) becomes the limiting factor when calculating maximum load and speed capacities. The user is responsible for determining the maximum capacity for the complete system based on the manufacturer's data for their drive configuration.



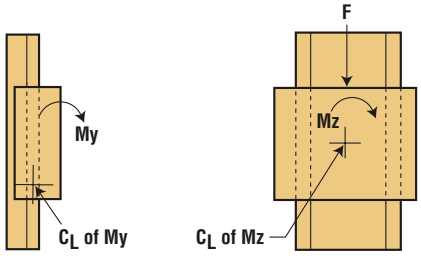
SIZE	Fz MAX LOAD (lbs.)	Fz MAX LOAD (N)
D075	500	2,224
D100	750	3,336
D125	1,000	4,448



SIZE	Fz (inverted) MAX LOAD (lbs.)	Fz (inverted) MAX LOAD (N)
D075	125	556
D100	190	845
D125	250	1,112



SIZE	Fy MAX LOAD (lbs.)	Mx (in./lbs.)	Mz (in./lbs.)	Fy MAX LOAD (N)	Mx (Nm)	Mz (Nm)
D075	250	340	350	1,112	38	40
D100	375	650	730	1,668	73	82
D125	500	1,200	1,225	2,224	136	138

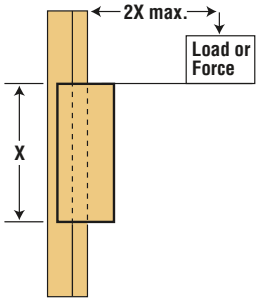


SIZE	My (in./lbs.)	Mz (in./lbs.)	My (Nm)	Mz (Nm)
D075	340	350	38	40
D100	650	730	73	82
D125	1,200	1,225	136	138

Designs must also operate within the following dynamic parameters:

- Maximum Loads (P) = from charts above
- Maximum Speed Dry (V) = 300 ft./min. (1.524 m/s)
- Maximum PV (pressure x velocity) = 20,000 (0.70 N/mm^2 x m/s)
- PV Example: Load = 85 psi
  Speed = 180 ft./min.
  PV = 85 x 180 = 15,300 PV

NOTE: Frelon GOLD® bearing material coefficient of friction is 0.125.



If the drive mechanism (lead screw, ball screw, cylinder, etc.) is centered on the carriage, the load may not exceed a 2:1 ratio to the length of the bearings or binding will occur.

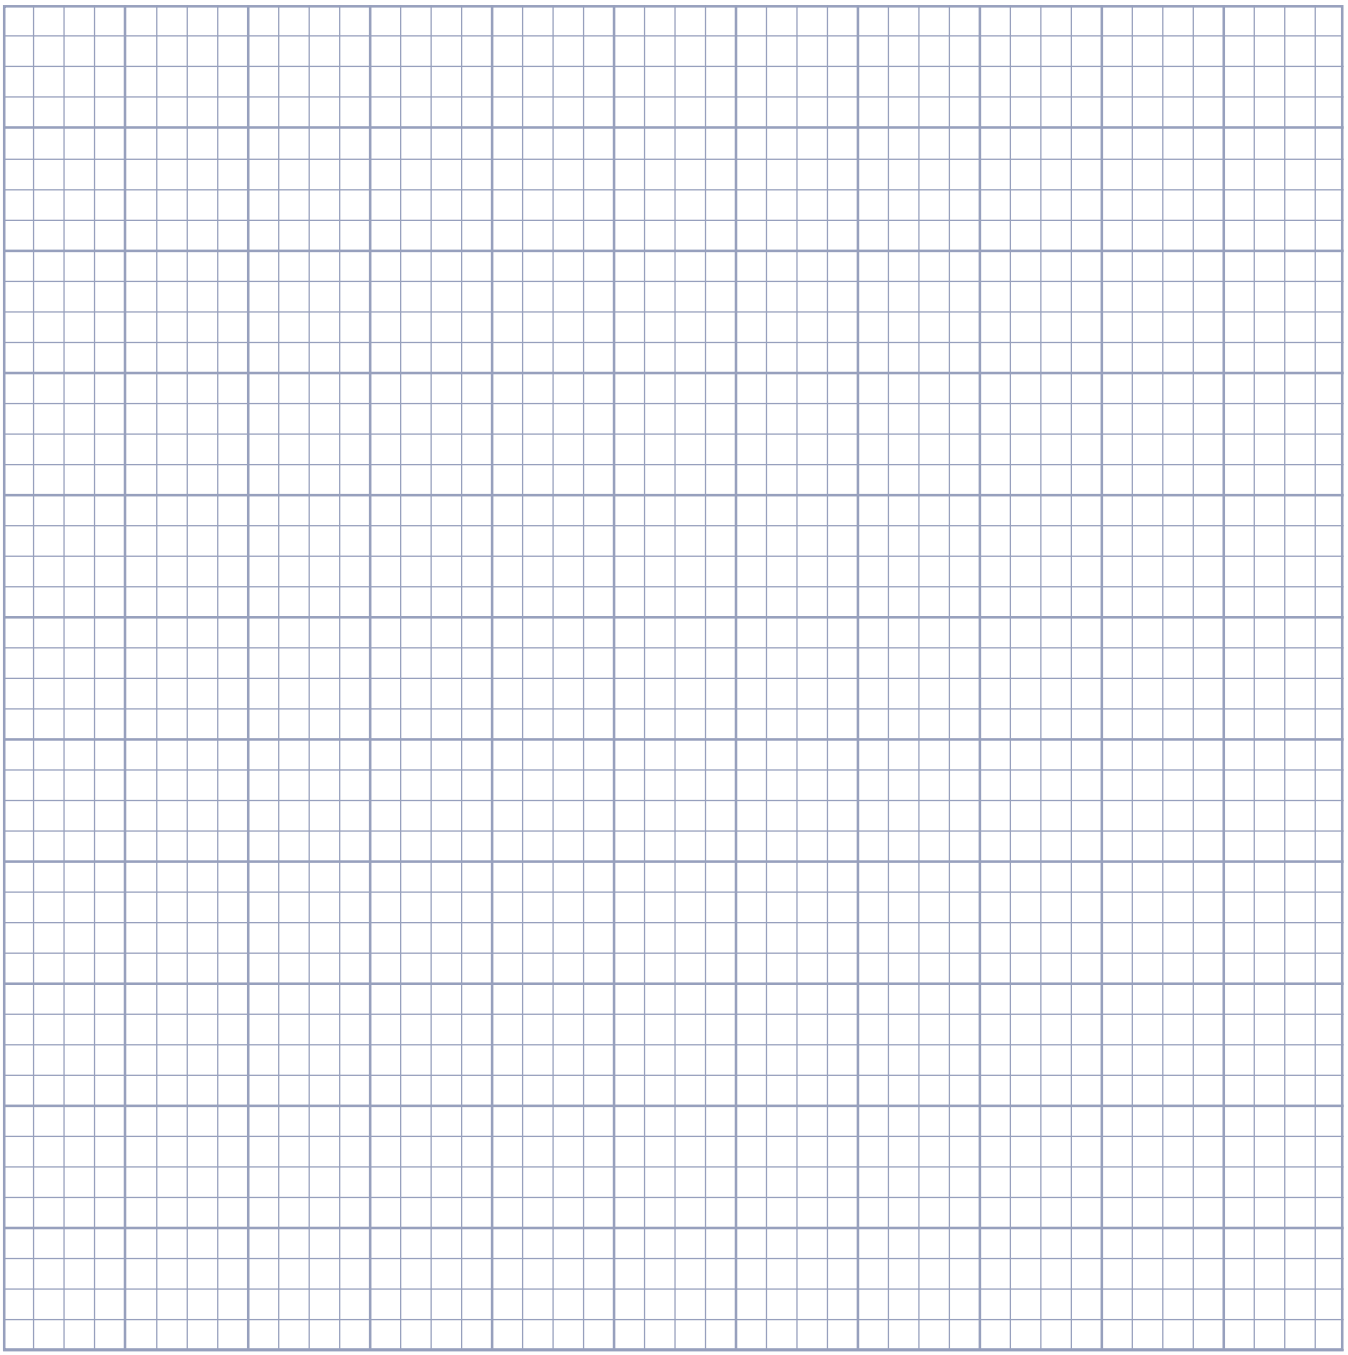
_____

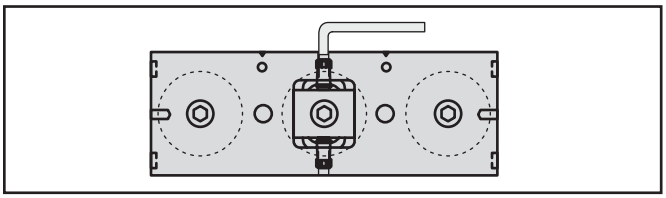


PRODUCT OVERVIEW

- Sealed double row bearings provide maintenance free, smooth linear guidance
- Side adjusted preload makes greatly simplifies assembly and installation
- Withstands temperatures up to 180°F
- Butt-joinable for longer length applications
- Available in Inch or ISO Metric

ADJUSTING SLIDE PRELOAD

The preload of a slide should be properly set from the factory, but if you must adjust it yourself, here are some simple steps to follow.



Metric Series

1. To loosen the eccentric (center) roller, use an Allen wrench to loosen the screw that is on the side of the mounting block. Be sure to loosen the screw that is on the side of the direction you want the roller to move.
2. When it is loose, tighten the set screw on the opposite side of the block. This will move the roller and mounting stud.
3. Make a very small change, retighten the first set screw, and try it out. If the preload is too loose, you will feel the slider rock and you will hear a slight “clunk.” If it is too tight, the slider will roll rough, like riding a bicycle on a gravel road.
4. Move the slide along the length of the rail by hand. Adjust it so that it does not feel loose anywhere. It may take you several times to get the proper adjustment.
5. Make sure the rollers are tightened with the proper adjustment prior to operation.

SLIDER ORIENTATION

The 3-Roller slide should be installed in the rail so the load is shared on the two outside rollers. The orientation marks indicate how to align the slider with the load direction.

LUBRICATION - RAILS & BEARINGS

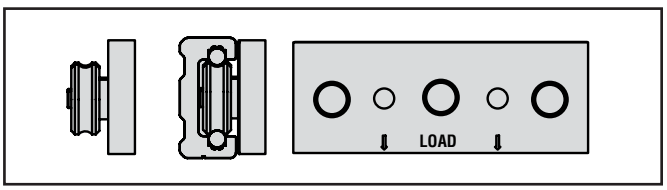
The rollers are internally lubricated for life, but the rails must always have a layer of grease. As a guideline, reapply fresh grease every 50,000 cycles.

SLIDER ORIENTATION

The 3-Roller slide should be installed in the rail so the load is shared on the two outside rollers. The orientation marks indicate how to align the slider with the load direction.

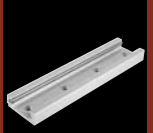
MOUNTING SLIDER BODY & MAX CAPACITY

Below are recommended bolt tightening torques for mounting to the slide body. Be sure to use bolts that are long enough to obtain full thread engagement.

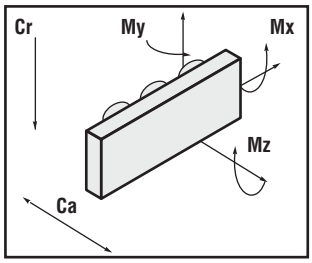


MOUNTING TORQUE

PART NUMBER	IN-LBS. TORQUE	NM TORQUE
RRS14 RRS30	25	3
RRS18 RRS45	70	8
RRS65	150	24



LIFE CALCULATIONS



Cd = Dynamic capacity (LC)
Cr = Radial capacity
Ca = Axial capacity
Mx, My, Mz = Moment capacities

Conversions

newton (N) x 0.2248 = lbs.
(lbf) meter x 0.0397 = inch
newton - meter (Nm) x 8.851 = in.-lbs.

INCH PART NO.	Cr (lbs.)	Ca (lbs.)	Mx (in-lbs.)	My (in-lbs.)	Mz (in-lbs.)
RRS14	336	79	21	54	201
RRS18	847	168	67	153	677
METRIC	**(N)**	**(N)**	**(Nm)**	**(Nm)**	**(Nm)**
RRS30	1,002	330	1.8	5.5	12.5
RRS45	2,660	827	6.6	19.9	47.9
RRS65	5,950	1,678	19.0	58.2	154.7

To calculate an approximate life for redi-rail sliders, use the following equation.

Inch Series

The value of L_{RR} is in meters

$$L_{RR} = 10^7 \bullet \ (Cd/(LoadEquiv \bullet RF))^{3.0} \ \text{(inches)}$$

LC_{RRS} = Slider Life Capacity which is found in the table

$Load_{Equiv}$ = Equivalent Radial Load found from the following equation:

$$Load_{Equiv} = Cr \bullet \left(\frac{Load_{Axial}}{Ca} + \frac{M_x}{M_{x\,Max}} + \frac{M_y}{M_{y\,Max}} + \frac{M_z}{M_{z\,Max}} \right) + Load_{Radial}$$

PART NO.	MAX SPEED (fpm)	MAX SPEED (ipm)	Cd
RRS14	500	6000	421
RRS18	800	9,600	1,032

Metric Series

The value of L_{RR} is in meters

$$L_{RR} = (Cd/Load_{Equiv} \bullet RF)^{3.0} \times 100{,}000 \text{ meters}$$

Cd = Slider Life Capacity which is found in the table

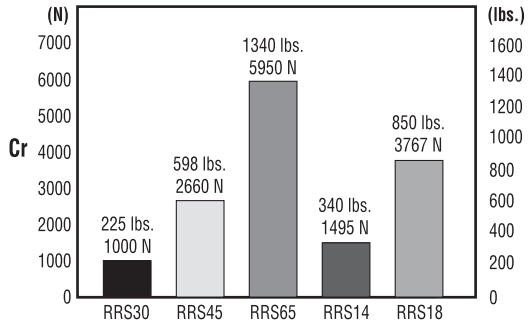
$Load_{Equiv}$ = Equivalent Radial Load found from the following equation:

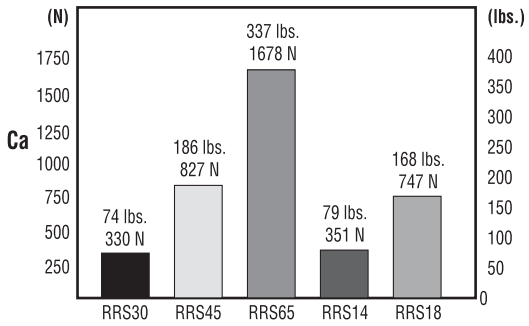
$$Load_{Equiv} = Cr \bullet \left(\frac{Load_{Axial}}{Ca} + \frac{M_x}{M_{x\,Max}} + \frac{M_y}{M_{y\,Max}} + \frac{M_z}{M_{z\,Max}} \right) + Load_{Radial}$$

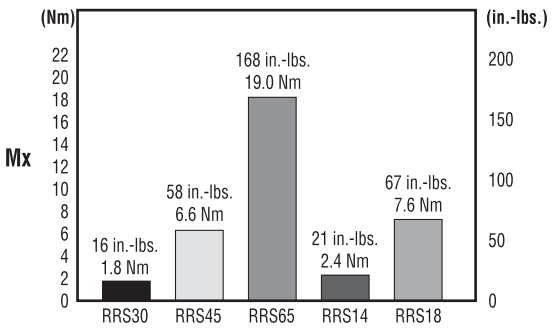
PART NUMBER	MAX SPEED (m/min)	MAX SPEED (m/s)	Cd (N)
RR30	300	5.0	1,440
RR45	420	7.0	4,404
RR65	480	8.0	10,200

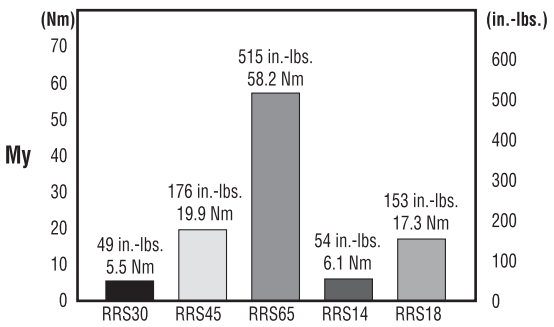
NOTE: Reduction factors apply to both inch and metric series
RF = Reduction Factor of the Application or Environment
- = 1.0 to 1.5 for very clean, low speed (<30% Max), low shocks
- = 1.5 to 2.0 for some dirtiness, moderate speed (30% Max to 75% Max), medium shocks and vibration
- = 2.0 to 3.0 for heavy dirt & dust, high speeds (>75% Max) and heavy shocks & vibrations

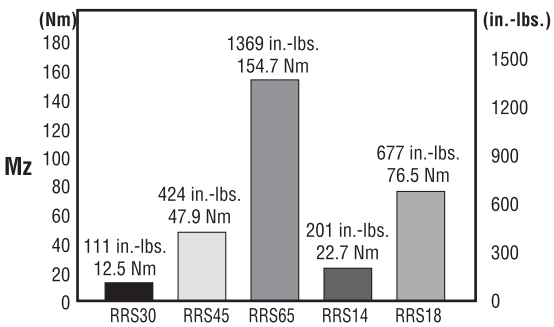
LOAD COMPARISON GRAPHS





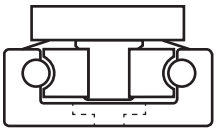


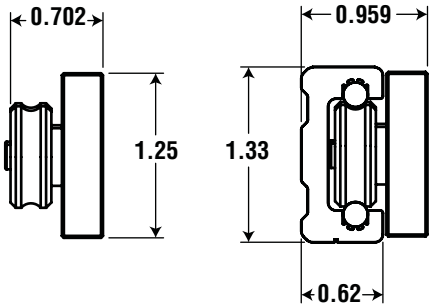


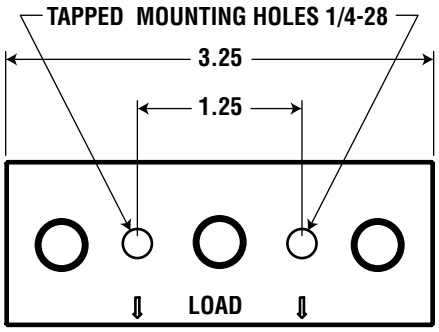


RRS14 SLIDE

- Low cost precision
- Factory adjusted
- Sealed bearings
- Solid bearing mounting system
- Up to 19' lengths
- Gothic arch rollers
- Aluminum alloy body
- Rollers are 52100 steel, sealed against contamination, and are mounted with hardened steel mounting accessories
- Not available with seals
- Maximum temperature approximately 180°F







NOTE: Slide weight 0.25 lbs./ea.

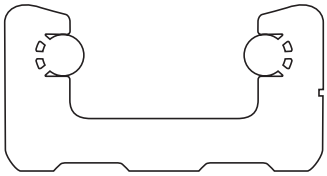
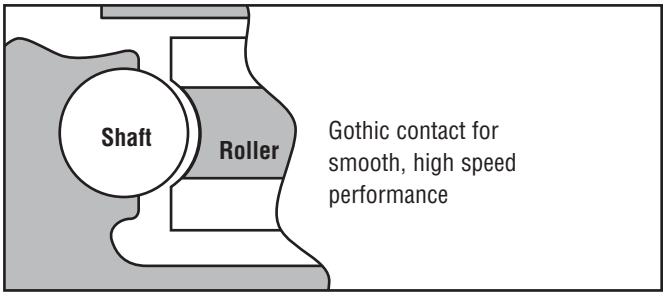
Redi-Rail® Linear Guides - ISO Metric

RRS30 SLIDE

- 5.79 Meter Lengths
- Sealed Bearings
- Integral Seals
- Easy Adjusting
- Gothic Arch Rollers
- Solid Roller Mounting
- Slider body is aluminum alloy.
- Maximum temperature approximately 80°C.
- Gothic rollers are 52100 steel, hardened and ground, lubricated for life and sealed against contamination.
- Oil-filled plastic or UHMW spring loaded seals keep contamination clear of the rollers.
- Custom roller configurations can be designed, engineered, and manufactured to meet your specific requirements.
- Patented pre-load adjustment eliminates eccentrics.

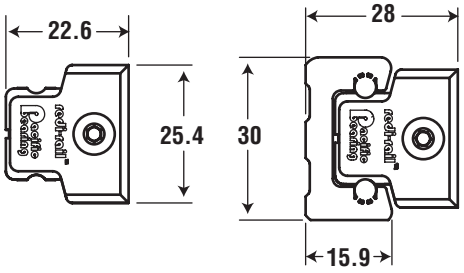


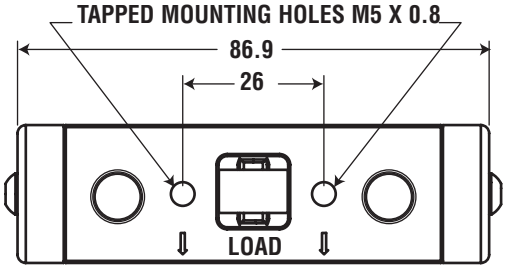
ROLLER/SHAFT INTERFACE



APPLICATIONS

- Automation
- Assembly
- Material Handling
- Packaging





NOTE: Slide weight .09 Kg

PRODUCT OVERVIEW

V-Guide System components provide an excellent alternative for linear motion applications in harsh environments with medium accuracy requirements, and high speed capabilities.

FEATURES & BENEFITS

V-Guide systems are an industry standard for linear motion, and offer features that make them an ideal solution for a wide range of motion control applications.

V-Guide Rail:
- Has shoulder for simple mounting and alignment
- Available in long lengths
- Induction hardened way surface
- 1045 Carbon Steel or 400 Series Stainless Steel
- Optional black oxide finish
- Choose predrilled rail from stock, or custom cut and drilled to your specification

V-Guide Wheels:
- Four (4) sizes
- Permanently lubricated
- Precision dual row bearing construction
- Available in 52100 Bearing Steel or 420 Stainless Steel construction
- 304 Stainless Steel shields, or nitrile rubber seals

Wheel Bushings:
- 303 Stainless Steel
- Inch or metric hardware
- Adjustable bushings allow adjustable fit and preload
- Fixed bushings are used in the primary radial load direction
- Stainless Steel construction

APPLICATIONS

- Machine tool doors
- Vending machines
- Woodworking machinery
- Carpet and textile machinery
- Laboratory automation
- Paper converting equipment
- Packaging machinery

TECHNICAL SPECIFICATIONS

V-Guide Wheels:
V-Guide Wheels are precision ground dual row angular contact ball bearings with hardened outer way surfaces that provide low friction guidance for linear motion applications. V-Guide wheels can be used with internal or external 90-degree ways, or used with round shafts.

V-Guide Rails:
The rail V-Ways are induction or flame hardened, ground and polished. The track body is left soft for easy drilling of mounting holes. Available in (4) four sizes, which are designed for the corresponding size wheels.

Wheel Bushings:
Bushings allow for the wheels to be mounted with the appropriate fastener for the specific application.

Working Temperature Rating: ≈ 180°F

V-Guide System - 20 mm (3/4")

Radial Loads to 283 lbs. (1,260 N) per Wheel

V-GUIDE WHEELS

VW1	Shielded Bearing
VWS1	Sealed Bearing

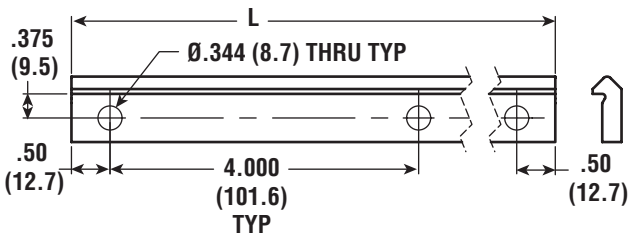
VRSD4-6100	61.00" (1549.4 mm)	16



LOAD CALCULATIONS

L = applied load / number of wheel pairs

L_R = wheel radial load

L_O = wheel load from moment

A = load offset dimension

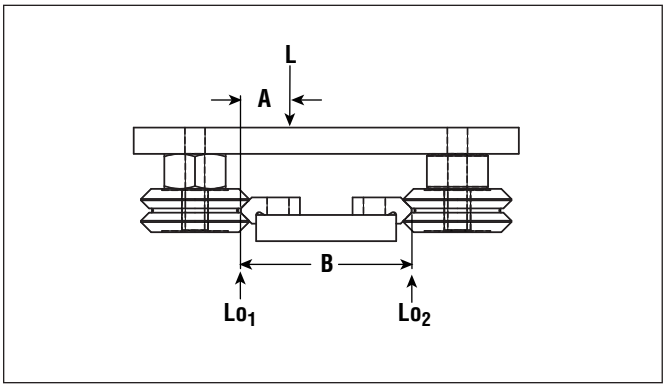
B = track width dimension

F_A = .5 for light duty, well lubricated use

F_A = 1 for normal lubricated use

F_A = 2 for dry, or harsh environments

LOAD CONDITION A



$$Lo_1 = \frac{L \times (B - A)}{B} \times F_A$$

$$Lo_2 = (L \times F_A) - Lo_1$$

Compare the greater of these loads to the rated moment and radial load capacities.

Example:

Load is 100 lbs on 4 wheel carriage,

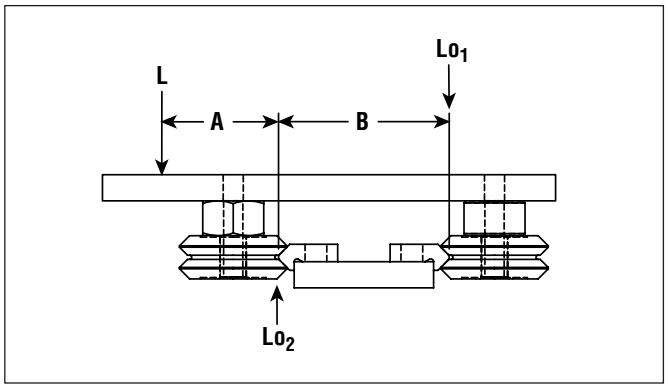
L = 100 / 2 pair wheels = 50 lbs.

A = 4", B = 10", F_A = 1

$$Lo_1 = \frac{50 \times (10 - 4) \times 1}{10} = 30 \text{ lbs.}$$

Lo_2 = 50 - 30 = 20 lbs.

LOAD CONDITION B



$$Lo_1 = \frac{L \times A}{B} \times F_A$$

$$Lo_2 = (L \times F_A) + Lo_1$$

Compare the greater of these loads to the rated moment and radial load capacities.

Example:

Load is 100 lbs. on 4 wheel carriage,

L = 100 / 2 pair wheels = 50 lbs.

A = 4", B = 6", F_A = 1

$$Lo_1 = \frac{50 \times 4 \times 1}{6} = 33 \text{ lbs.}$$

Lo_2 = 50 + 33 = 83 lbs.

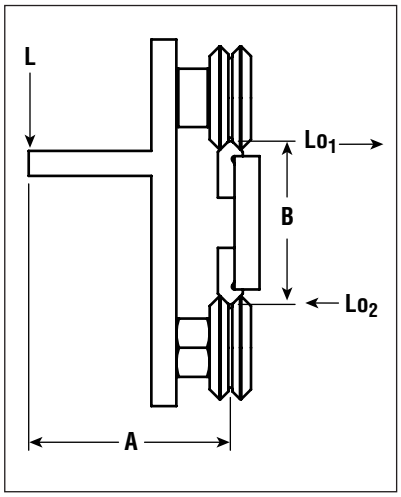
LOAD CONDITION C

$$Lo_1 = \frac{L \times A}{B} \times F_A$$

$$L_R = (L \times F_A) + Lo_1$$

$$Lo_1 = Lo_2$$

Compare the greater of these loads to the rated moment and radial load capacities.



Example:

Load is 100 lbs. on 4 wheel carriage,

L = 100 / 2 pair wheels = 50 lbs.

A = 4", B = 6", F_A = 1

$$Lo_1 = \frac{50 \times 4 \times 1}{6} = 33 \text{ lbs.}$$

L_R = (50 x 1) + 33 = 83 lbs.

MOUNTING AND ADJUSTMENT

Use the recommended fasteners for the specified track and wheel bushings.

Use the following table, and the center distance formulas in the next column, to configure the appropriate wheel mounting dimensions.

V-RAIL SIZE	IV (in.)	OV (in.)	IV (mm)	OV (mm)
1	0.874	0.934	22.2	23.7
2	1.374	1.436	34.9	36.5
3	2	2.124	50.8	53.9
4	2.624	2.75	66.6	69.9

The fixed bushing should be used to carry the heaviest loading. Preload the adjustable bushing so that the wheel can just be turned by hand. Over-tightening the preload will cause premature wear of the components.

LUBRICATION

The V-Guide wheels are grease lubricated, and will not require any additional lube. The track should be lubricated for optimum performance and service life. Suggested lubricants are Mobil Vactra #2 Way Oil, or Mobil Polyrex EP 2 Extreme Pressure Grease.

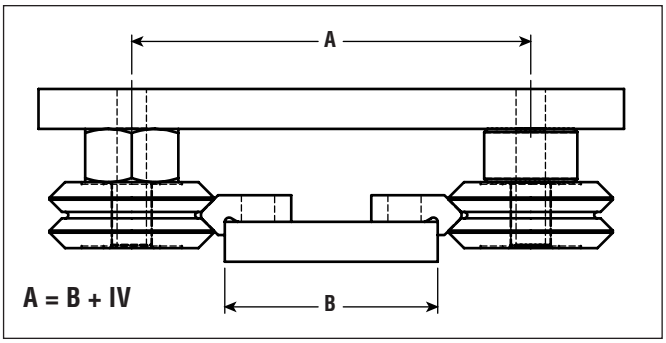
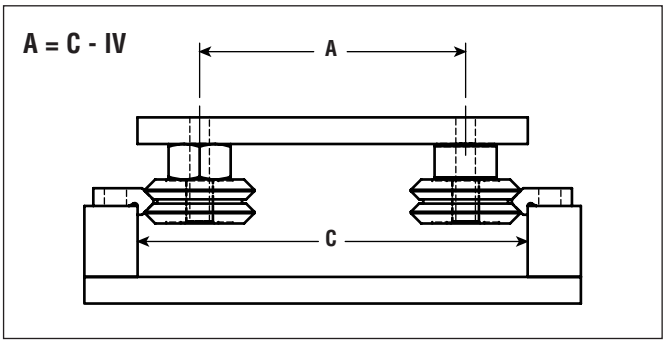
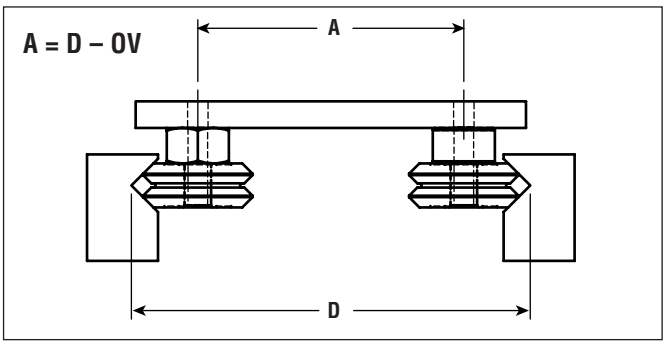
CENTER DISTANCE FORMULA

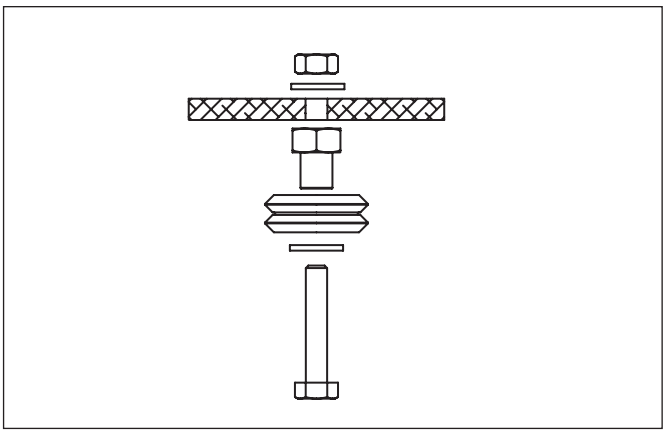






WHEEL / BUSHING ASSEMBLY

Use SAE series N flat washers and lock washers to secure the wheel bushing assemblies.



PRODUCT OVERVIEW

Commercial Rail is a simple and cost effective linear motion solution with high load capacity and corrosion resistance.

- Roll formed rails made of steel/stainless steel sheet for low cost and corrosion resistance application
- Zinc plated rail length up to 6,000 mm
- Machined slider body made of aluminum alloy and anodized for corrosion resistance
- Steel rollers are made of 52100 chrome steel, hardened and ground, lubricated for life and sealed against contamination
- Stainless steel rollers made of 440C stainless steel for better corrosion resistance, lubricated for life and sealed against contamination
- Rollers made with thread integrated inner ring for ease of assembly and adjustment of pre-load
- Custom polymer wipers can be designed and manufactured to improve the smoothness of motion and service life
- Maximum operating temperature 100°C or 212°F
- Consult with factory for special hole spacing
- Speed up to 1.5 m/s
- Moment loads should be carried by two slides or two parallel rollers

SLIDE ORIENTATION

The 3-roller slide should be installed in the rail so that the load is shared among the two outside rollers. The orientation marks indicate how to align the slider with the load direction

LUBRICATION – RAILS & BEARINGS

The rollers are internally lubricated for life, but the rails must always have a layer of grease. As a guideline, reapply fresh grease every 50,000 cycles.

PRELOAD ADJUSTMENT

- To loosen the center roller, use an Allen wrench to un-tighten the screw while holding the roller still with an open-end wrench
- Turn the center roller to a position to achieve the desired pre-load
- Move the slide along the length of the rail by hand. Adjust it so that it does not feel loose anywhere.
- Tighten the screw while holding the roller flat with an open-end wrench

PRELOAD ADJUSTMENT	CR20/CRSS20	CR30/CRSS30	CR45/CRSS45
Wrench flat sq. (mm)	6	10	14

APPLICATIONS

- Automation
- Packaging, material handling, etc
- Environmental, energy, HVAC, etc.
- Medical
- Office equipment

Hardened Crown Rollers
Inch & ISO Metric Series

FEATURES & BENEFITS

- Low cost linear motion solution
- Precision rolling element bearing riding in a rail from Copper B-Line Series
- 9/16" Hex head for easier mounting
- Simple solution and setup for point-to-point applications
- Rollers provide self-alignment, durability and longevity
- MAX. bearing load - 300 lbs.
- MAX. bearing speed - 150 ft./ min. (30 in./sec.)
- Rails lengths available up to 10 ft. Contact manufacturer for longer lengths.

RAILS FINISHES:

- Bare steel
- Powder coated

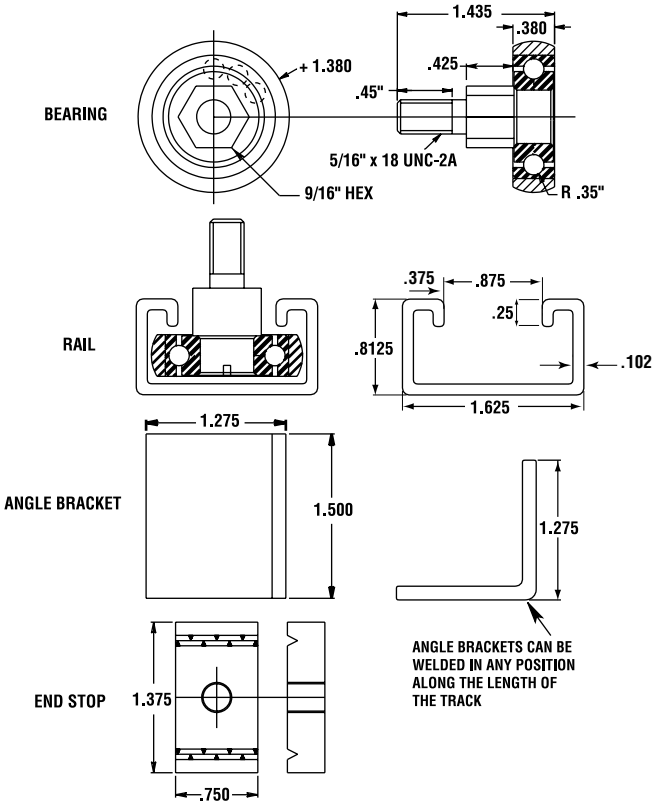
ACCESSORIES AVAILABLE:

- Angle brackets (for welding to mounting rail)
- End stops

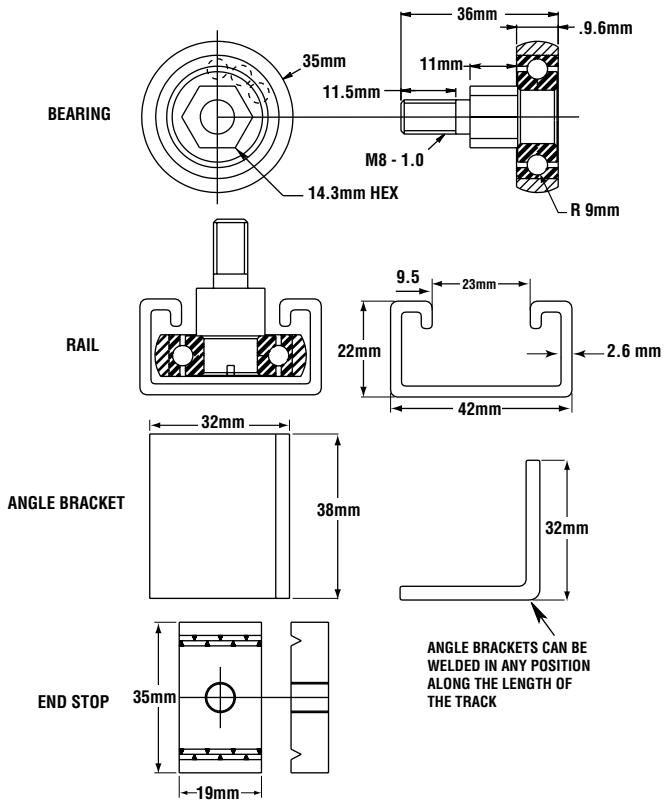
ORDERING INFORMATION

PART NUMBER	DESCRIPTION
PAC3016	Hardened Crown Roller Bearing
PAC3016M	Hardened Crown Roller Bearing with metric thread
PAC2245	Rail System - unpainted (specify length - priced per foot)
PAC2247	Rail System - black powder coat finish (specify length- price per foot)
PAC2244	Angle Brackets - 1" Steel
PAC2246	End Stops for Rail System (bolt included)

INCH



METRIC



NOTE: All metric dimensions are conversions from inch dimensions all parts are manufactured to inch standards.

PRODUCT OVERVIEW

The economical Hevi-Rail® guide systems offer a lifetime of durability under continuous use. The easily interchangeable bearing components provide even dispersion of forces in the profile rails for longer system life and stability.

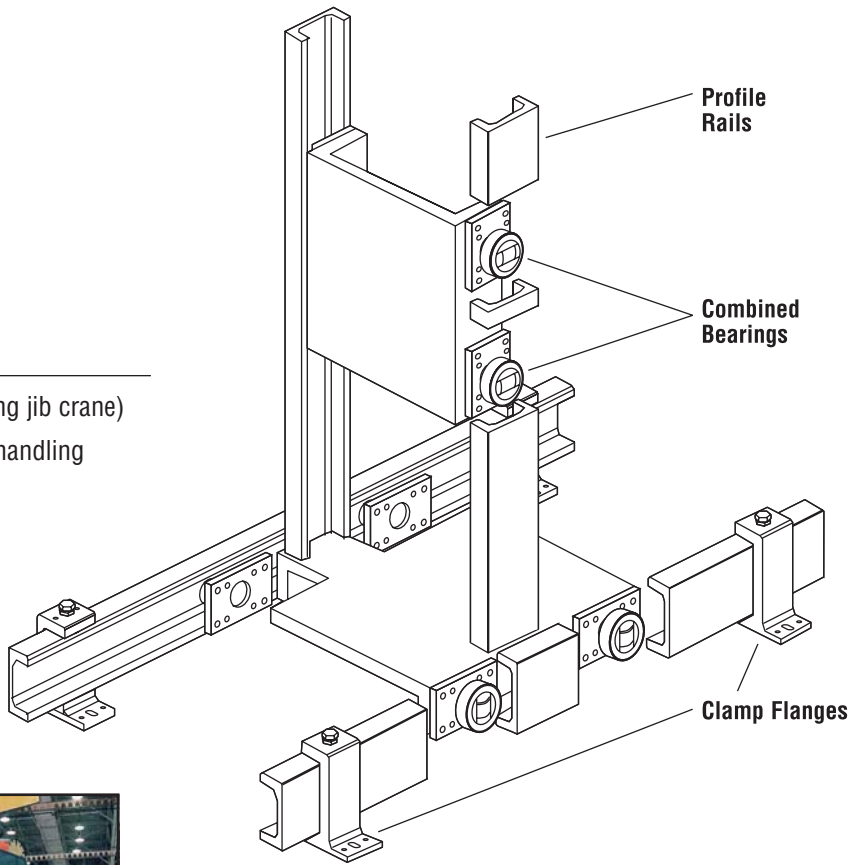
Linear Bearings:
- Outer ring made of case-hardened steel
- Handles very high axial and radial loads
- Easily interchangeable components for less down-time

Profile Rails:
- Standard length up to 6 meters
- Sand blasted or lightly oiled
- U-channel or I-channel available

Flange Plates:
- Simple mounting for bearings
- Can be ordered pre-welded to bearing

Ordering example: HVB-054/HVPO

Clamp Flanges:
- Adjustable
- Eliminates need for welding and straightening
- Easily adjustable parallelism



APPLICATIONS

- Telescoping applications (ex. overhead extending jib crane)
- Warehouse handling systems / other material handling
- Custom and standard lift units
- Large Shrink-wrap machinery
- Steel and coil handling
- Large variety of material handling

TECHNICAL SPECIFICATIONS

Linear Bearing for Axial & Radial Loads
Prior to welding, disassemble bearing components. To avoid cracks in welded joints, please use welding electrodes and core weld for unalloyed steel.

Materials:

Outer ring - Case-hardened steel UNI 20 MnCr 5 hardened at 60+2 HRc

Inner ring - Hardened steel En 31 - SAE 52100 hardened at 62-2 HRc

Cylindrical rollers - Flat ground heads are hardened steel, En 31 - SAE 52100, hardened at 59-64 HRC

Bolt tolerance = 0.05 mm

Profile Rails: High quality steel, ASTM A 252 Gr.1, A 252 Gr.2, A 252 Gr.3, A 663 Gr.45-80, A 675 Gr. 45-90. Standard length (1024/1524 steel) of 6 m (19.7ft.). MnCr 5 with maximum contact pressure of 750 MPa (N/mm2). Optional sand blasted and/or lighty oiled. Rails are not hardened but have a Brinell hardness of 145-185. The guide ways in the rails should be lightly greased and not painted.

Clamp Flange: Low carbon steel, adjustable clamp

Flange Plate: Low carbon steel. Special designs available, contact manufacturer.

Seals: Bearings with fixed axial bearing (HVB-053 to HVB-063) - radial bearing has steel labyrinth and side guide roller with rubber seals

Bearings with eccentric adjustable axial bearing (HVBEA-454 to HVBEA-463) - Both radial and axial bearings utilize rubber seals (RS type)

Lubrication: Bearings are supplied lubricated with grease grade 3. Bearings from HVB-056 to HVB-063 can be re-lubricated with grease zerk. Adjustable bearings are not available with zerk.

Temperature: Resistant from -10°C to 80°C (14°F to 176°F)

Bearing Life Calculations:

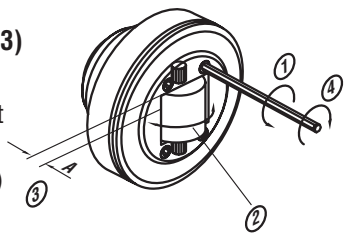
$$L10 = \left(\frac{1666}{n}\right)\left(\frac{C}{P}\right)^{10/3} \text{ (Hours)}$$

C = Dynamic load rating (KN)
P = Automatic dynamic load (KN)
n = Revolutions per minute (rpm)

NOTE: Above calculation formula is for predicting life expectance with 90% reliability level. Customers shall use their discretion to determine the reduction factor based on the actual operation needs and conditions such as reliability level, load, speed, impact and environments.

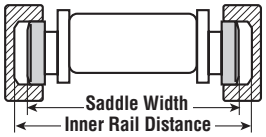
Adjusting Axial Bearing (HVBEA-454 to HVBEA-463)

1. Remove front screws.
2. Rotate axial bearing shaft
3. Check dimension A
   (repeat step 2, if needed)
4. Re-install front screws



SYSTEM DESIGN CLEARANCE

1. The overall system clearance should be 1.524 mm to 3.048 mm



Inner Rail Distance = Saddle Width + (1.524 mm to 3.048 mm)

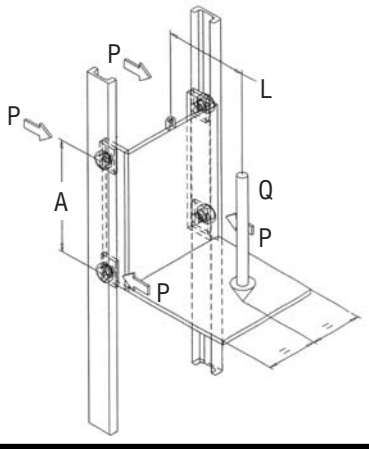
2. Verify that the Axial bearing is aligned parallel to the rail; especially in vertical operations.

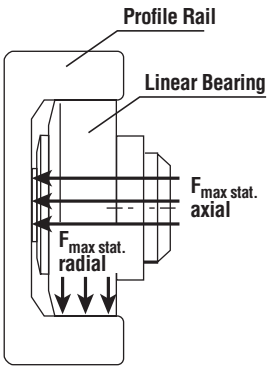
CALCULATION OF FMAX FOR CANTILEVERED LOADS

Q = Load capacity (N)
L = Load distance to suspension point (mm)
P = Suspension point
A = Bearing distance (mm) recommended 500–1000 mm

Formula: $F_{max}[N]_{\text{stat radial}} = \frac{Q \bullet L}{2 \bullet A}$

P_{zul} = 750 N/mm² for all profile rails. Indicated here are F_{max} stat radial + axial for each bearing.





SELECTION GUIDE (when used with Profile Rails HVR-S to HVR-6)

Use the following chart to select the bearings (fixed or adjustable), rails, flange plates and clamp flanges according to your system's maximum static radial and axial loading. A "system" is defined as a bearing in the corresponding rail. For dimensional and detailed specifications for the system selected, simply refer to the corresponding pages.

F (KN) MAX STAT RADIAL	F (KN) MAX STAT AXIAL	COMBINED BEARING AXIAL BEARING FIXED	COMBINED BEARNG AXIAL BEARING ADJUSTABLE	PROFILE RAILS	CLAMP FLANGE	FLANGE PLATE	PAGE NO.

Ix = 1037.22 cm^4, Iy = 161.89 cm^4

DIST. TO CENTER OF GRAVITY

ey = 6.48 cm, ex = 4.05 cm

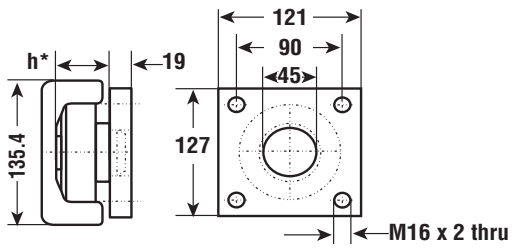
RADIUS OF INERTIA

ix = 4.89 cm, iy = 1.93 cm

MOMENT OF RESISTANCE

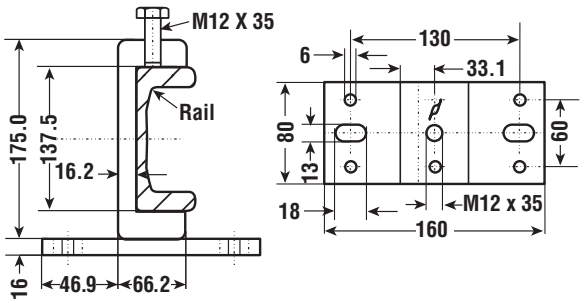
Wx = 160.07 cm^3,
Wy = 39.97 cm^3

FLANGE PLATE — HVP3-1



* "h" refers to the depth of the axial bearing, so "h" depends on choice of HVB-058 or HVBEA-458.

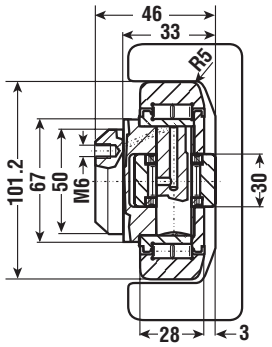
CLAMP FLANGE — HVC-3



WHEN USED WITH SHOWN PROFILE RAILS

System Max. Static Radial Load = 15.6 KN / 1.7 US Ton-Force
System Max. Static Axial Load = 5.2 KN / 0.6 US Ton-Force

AXIAL BEARING - FIXED HVB-059



WEIGHT = 1.80 Kg

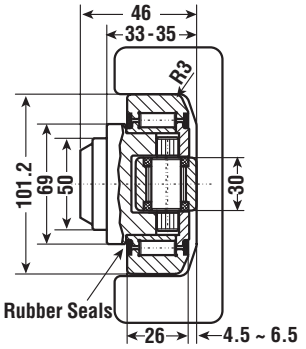
BEARING RADIAL LOAD

Max. dynamic load = 92 KN
Max. static load = 153 KN

BEARING AXIAL LOAD

Max. dynamic load = 32 KN
Max. static load = 50 KN

ECCENTRIC ADJUSTABLE HVBEA-459



WEIGHT = 1.74 Kg

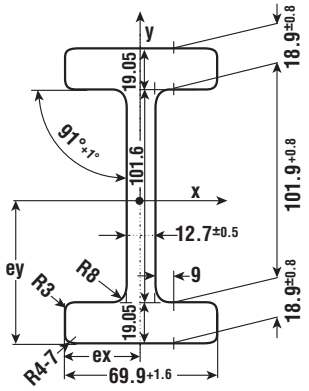
BEARING RADIAL LOAD

Max. dynamic load = 91 KN
Max. static load = 140 KN

BEARING AXIAL LOAD

Max. dynamic load = 32 KN
Max. static load = 50 KN

PROFILE RAIL I-CHANNEL HVRI-10



WEIGHT = 30.9 Kg/m

MOMENT OF INERTIA

Ix = 1078.01 cm^4, Iy = 104.38 cm^4

DIST. TO CENTER OF GRAVITY

ey = 6.99 cm, ex = 3.49 cm

MOMENT OF RESISTANCE

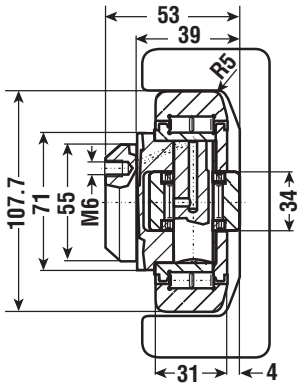
Wx = 154.33 cm^3, Wy = 29.89 cm^3

NOTE: Above loads achievable when used with a hardened rail 55 RC minimum 2.54mm deep.

WHEN USED WITH SHOWN PROFILE RAILS

System Max. Static Radial Load = 15.5 KN / 1.7 US Ton-Force
System Max. Static Axial Load = 5.1 KN / 0.6 US Ton-Force

AXIAL BEARING - FIXED HVB-060



WEIGHT = 2.30 Kg

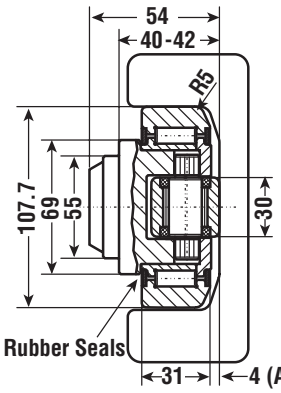
BEARING RADIAL LOAD

Max. dynamic load = 100 KN
Max. static load = 174 KN

BEARING AXIAL LOAD

Max. dynamic load = 39 KN
Max. static load = 66 KN

ECCENTRIC ADJUSTABLE HVBEA-460



WEIGHT = 2.27 Kg

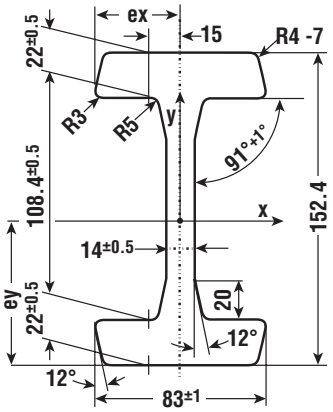
BEARING RADIAL LOAD

Max. dynamic load = 100 KN
Max. static load = 174 KN

BEARING AXIAL LOAD

Max. dynamic load = 32 KN
Max. static load = 50 KN

PROFILE RAIL I-CHANNEL HVRI-11



WEIGHT = 40.5 Kg/m

MOMENT OF INERTIA

Ix = 1670.08 cm^4, Iy = 184.52 cm^4

DIST. TO CENTER OF GRAVITY

ey = 7.62 cm, ex = 4.15 cm

RADIUS OF INERTIA

ix = 5.69 cm, iy = 1.91 cm

MOMENT OF RESISTANCE

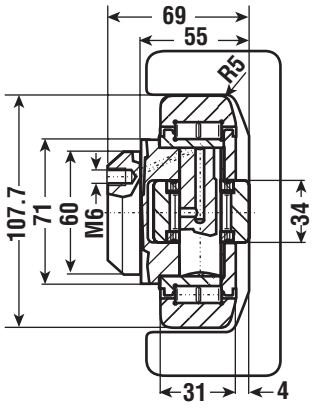
Wx = 219.17 cm^3, Wy = 44.46 cm^3

NOTE: Above loads achievable when used with a hardened rail 55 RC minimum 2.54mm deep.

WHEN USED WITH SHOWN PROFILE RAILS

System Max. Static Radial Load = 16.5 KN / 1.8 US Ton-Force
System Max. Static Axial Load = 5.5 KN / 0.6 US Ton-Force

AXIAL BEARING - FIXED — HVB-061



WEIGHT = 2.82 Kg

BEARING RADIAL LOAD

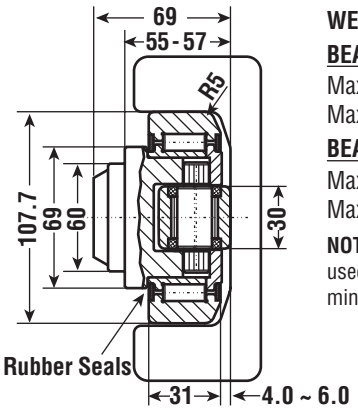
Max. dynamic load = 100 KN
Max. static load = 174 KN

BEARING AXIAL LOAD

Max. dynamic load = 39 KN
Max. static load = 66 KN

NOTE: Above loads achievable when used with a hardened rail 55 RC minimum 2.54mm deep.

ECCENTRIC ADJUSTABLE — HVBEA-461



WEIGHT = 2.82 Kg

BEARING RADIAL LOAD

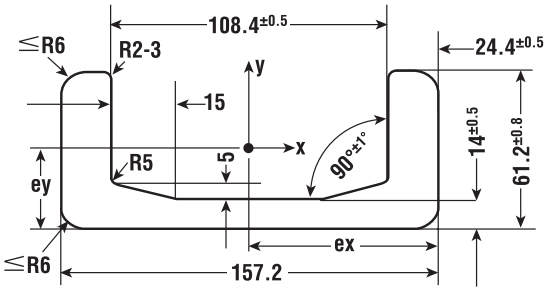
Max. dynamic load = 100 KN
Max. static load = 174 KN

BEARING AXIAL LOAD

Max. dynamic load = 32 KN
Max. static load = 50 KN

NOTE: Above loads achievable when used with a hardened rail 55 RC minimum 2.54mm deep.

PROFILE RAIL U-CHANNEL — HVR-4



WEIGHT = 35.9 Kg/m

MOMENT OF INERTIA

Ix = 150.98 cm^4,
Iy = 1,494.32 cm^4

DIST. TO CENTER OF GRAVITY

ey = 2.25 cm, ex = 7.86 cm

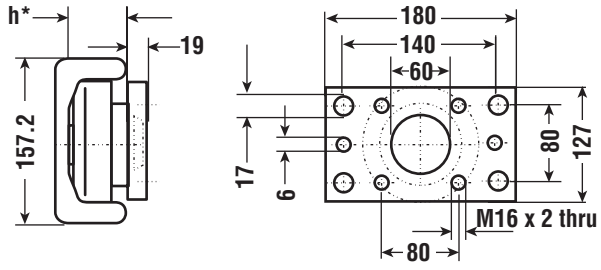
RADIUS OF INERTIA

ix = 1.82 cm, iy = 5.72 cm

MOMENT OF RESISTANCE

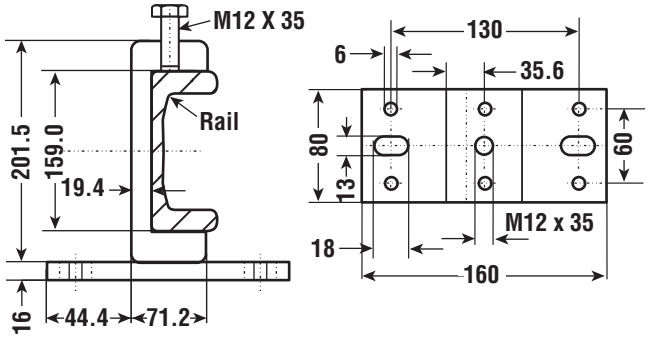
Wx_{min} = 39.00 cm^3
Wx_{max} = 67.13 cm^3
Wy = 190.12 cm^3

FLANGE PLATE — HVP4-1



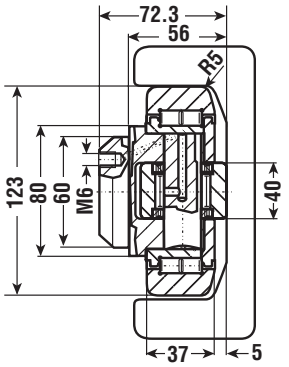
* "h" refers to the depth of the axial bearing, so "h" depends on choice of HVB-061 or HVBEA-461.

CLAMP FLANGE — HVC-4



WHEN USED WITH SHOWN PROFILE RAILS	System Max. Static Radial Load = 16.5 KN / 1.8 US Ton-Force System Max. Static Axial Load = 5.5 KN / 0.6 US Ton-Force

AXIAL BEARING - FIXED — HVB-062



WEIGHT = 4.50 Kg

BEARING RADIAL LOAD

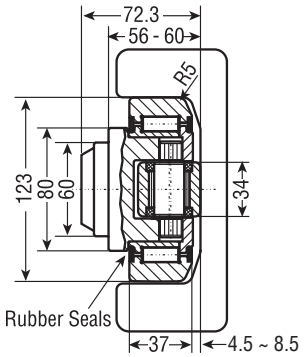
Max. dynamic load = 135 KN
Max. static load = 242 KN

BEARING AXIAL LOAD

Max. dynamic load = 47 KN
Max. static load = 90 KN

NOTE: Above loads achievable when used with a hardened rail 55 RC minimum 2.54mm deep.

ECCENTRIC ADJUSTABLE — HVBEA-462



WEIGHT = 3.90 Kg

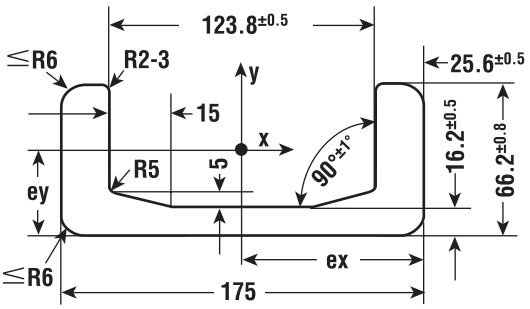
BEARING RADIAL LOAD

Max. dynamic load = 135 KN
Max. static load = 242 KN

BEARING AXIAL LOAD

Max. dynamic load = 41 KN
Max. static load = 72 KN

PROFILE RAIL U-CHANNEL — HVR-5



WEIGHT = 42.9 Kg/m

MOMENT OF INERTIA

Ix = 205.84 cm^4,
Iy = 2,185.32 cm^4

DIST. TO CENTER OF GRAVITY

ey = 2.37 cm, ex = 8.75 cm

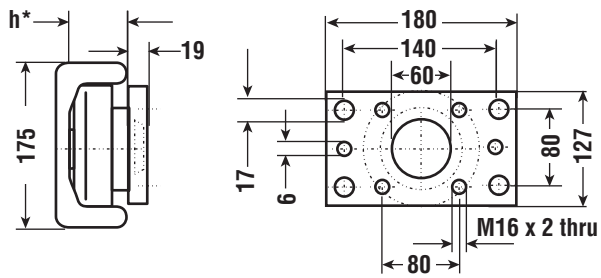
RADIUS OF INERTIA

ix = 1.94 cm, iy = 6.32 cm

MOMENT OF RESISTANCE

Wx_{min} = 48.42 cm^3
Wx_{max} = 86.89 cm^3
Wy = 249.75 cm^3

FLANGE PLATE — HVP4-1

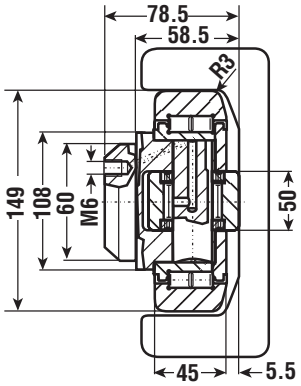


* "h" refers to the depth of the axial bearing, so "h" depends on choice of HVB-062 or HVBEA-462.

WHEN USED WITH SHOWN PROFILE RAILS,

System Max. Static Radial Load = 23.5 KN / 2.6 US Ton-Force
System Max. Static Axial Load = 7.8 KN / 0.9 US Ton-Force

AXIAL BEARING - FIXED — HVB-063



WEIGHT = 6.52 Kg

BEARING RADIAL LOAD

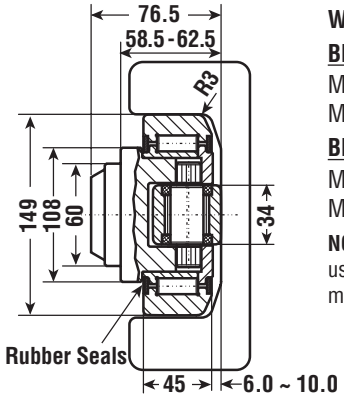
Max. dynamic load = 183 KN
Max. static load = 353 KN

BEARING AXIAL LOAD

Max. dynamic load = 82 KN
Max. static load = 131 KN

NOTE: Above loads achievable when used with a hardened rail 55 RC minimum 2.54mm deep.

ECCENTRIC ADJUSTABLE — HVBEA-463



WEIGHT = 6.50 Kg

BEARING RADIAL LOAD

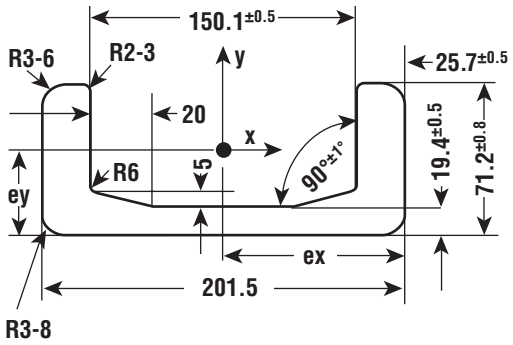
Max. dynamic load = 183 KN
Max. static load = 353 KN

BEARING AXIAL LOAD

Max. dynamic load = 41 KN
Max. static load = 72 KN

NOTE: Above loads achievable when used with a hardened rail 55 RC minimum 2.54mm deep.

PROFILE RAIL HVR-6



WEIGHT = 52.3 Kg/m

MOMENT OF INERTIA

Ix = 269.52 cm^4,
Iy = 3,423.08 cm^4

DIST. TO CENTER OF GRAVITY

ey = 2.40 cm, ex = 10.08 cm

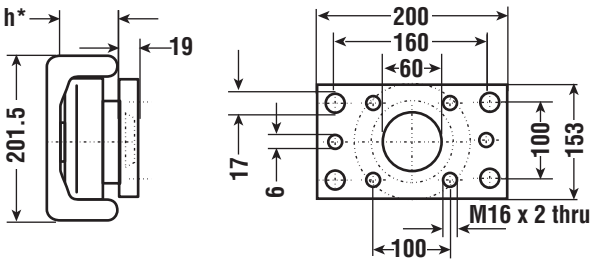
RADIUS OF INERTIA

ix = 2.01 cm, iy = 7.17 cm

MOMENT OF RESISTANCE

Wx_{min} = 57.15 cm^3
Wx_{max} = 112.11 cm^3
Wy = 339.76 cm^3

FLANGE PLATE — HVP6-1



* "h" refers to the depth of the axial bearing, so "h" depends on choice of HVB-063 or HVBEA-463.

WHEN USED WITH SHOWN PROFILE RAILS	System Max. Static Radial Load = 41.1 KN / 4.6 US Ton-Force System Max. Static Axial Load = 13.7 KN / 1.5 US Ton-Force

LINEAR MOTION SOLUTIONS

Simplicity® Self-Lubricated Bearings, Guides, Systems & Slides

Self-Lubricating Linear Plane Bearing and Shafting

- Oil-free - maintenance free
- Tolerates extreme temperatures
- Dampens vibration & shock loads
- Engineered-to-match shafting, pillow blocks and support rails

simplicity®

Self-Lubricating Miniature Linear Guides

- No rolling elements
- Lengths up to 3600 mm (12 ft.)
- No lubrication required
- Tolerates extreme temperatures

mini® rail

Redi-Rail Linear Guides, Drawer Slides and V-Guide Systems

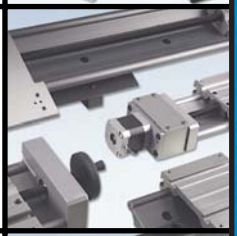
- Ideal for long travel and harsh environment applications
- Precision tolerances +/- .025 mm over entire rail length
- Simple design for fast, easy installation
- Lightweight, durable construction

redi-rail®

Modular Guides, Slides, Tables and Stage Assemblies

- Dampens vibration & shock loads
- Customize with ball or lead screws, belt drives & more
- No lubrication required
- Tolerates temperature extremes

Uni-guide®



Heavy-Duty Rolling Element Bearings and Rails

- Extremely high load capacity up to 4.6 US Ton-force
- Longer service life for bearings and profiles
- Unlimited rail lengths available

Hevi-Rail® Heavy Duty Bearing Systems
